EDUCATION

Louisiana State University

Computer Science Coursework

Baton Rouge, LA

Aug. 2022 – May 2023

Southeastern Louisiana University

Bachelor of Science in Computer Science, Minor in Mathematics

Hammond, LA

Aug. 2023 – Present

EXPERIENCE

Teaching Assistant - The Energize Project

Apr. 2026 – Present

Southeastern Louisiana University

Hammond, LA

- Developed 50+ in-depth learning materials covering key computer science topics including merge sort, quicksort, linked lists, binary trees, hash tables, Big-O analysis, and OOP concepts like inheritance and polymorphism, supported by annotated code and visual walkthroughs.
- Led interactive labs where students implemented and debugged algorithms, built full-stack projects using React Native, Node.js, and MongoDB, and practiced real-world software engineering workflows with Git, code reviews, and testing.
- Mentored students one-on-one and in small groups to improve pseudocode logic, debugging skills, and conceptual reasoning for Praxis and course exams, focusing on how and why solutions work rather than rote memorization.

Campus Card Operations

Apr. 2024 – Aug. 2024

Southeastern Louisiana University

Hammond, LA

- Provided customer service and technical support related to campus card services
- Issued Southeastern IDs and departmental copy cards while supporting the Lion's Lagniappe program and vending services across main and satellite campuses

PROJECTS

Caffeinated Lions | C#, ASP.NET Core Web API, SQL Server, Azure, Expo, Stripe

Jan. 2026 – Apr. 2026

- Built a full-stack coffee ordering platform for Caffeinated Lions with a React web app, Expo/React Native Android app, and ASP.NET Core Web API backend
- Designed and implemented backend features for authentication, locations, menu, orders, reservations, previous orders, and favorites using C#, Entity Framework Core, and SQL Server
- Connected web and mobile frontends to a shared deployed API and database, supporting flows such as sign up/login, location selection, menu browsing, cart, checkout, and order status
- Configured deployment and environment setup for local and cloud testing using Azure App Service, Azure SQL, GitHub Actions, CORS and Stripe(Payment)
- Integrated or prepared Stripe payment support for secure checkout in the ordering flow

EEG Circuit | Python, Arduino (C/C++), Filtering (HPF, LPF, Notch)

Jan. 2025 – May 2025

- Designed and developed an EEG/ECG acquisition circuit using Arduino (C/C++) and Python for real-time brainwave and heartbeat analysis
- Implemented AI-assisted Python scripts to generate and refine signal processing workflows, improving EEG signal clarity by 40% through FFT-based frequency analysis
- Utilized Processing-based software to visualize real-time brain wave data and implemented FFT for frequency domain analysis
- Integrated real-time data visualization and validation pipelines, ensuring accurate and consistent signal interpretation across trials

PropertyOps | ASP.NET Core, C#, Entity Framework Core, SQL Server, OpenAI API, REST APIs

- Built a full-stack property-management application for managing locations, users, and operational property data.
- Developed secure RESTful APIs using ASP.NET Core, C#, Entity Framework Core, and SQL Server, including CRUD operations, DTOs, validation, and authentication/authorization.
- Integrated the OpenAI API into the application to provide AI-powered assistance and generate useful responses from property-management data.
- Designed backend services to securely handle API requests, protect sensitive configuration values, and connect the AI feature with the application workflow.

TECHNICAL SKILLS

Languages: C#, Python, Java, C++, JavaScript, SQL, HTML/CSS

Frameworks: ASP.NET Core, React, Django, Flask, Node.js, Expo

Developer Tools: Git, GitHub Actions, Azure App Service, Azure SQL, Docker, AWS (EC2, S3, RDS, Lambda), Google Cloud Platform, OpenAI

Concepts: Agile Development, REST APIs, SQL Data Management, CI/CD, UX/UI Principles
